### **Las Animas County Reports Eleventh Confirmed Case of COVID-19**

**Las Animas County, CO** - Las Animas Huerfano Counties District Health Department has received confirmation that a Las Animas County resident has tested positive for Coronavirus Disease/COVID-19. This is the eleventh confirmed case of a resident currently within the county.

The positive COVID case is a woman in her 60s who is recovering at home. The Las Animas Huerfano Counties District Health Department public health nurse has begun a contact investigation to determine if there were any additional exposures.

As we continue to see increases in cases for our neighboring counties and states, it's important to remain vigilant in our defense against COVID-19. As it was in the beginning, the following measures remain your best and first line of defense:

- Wash your hands thoroughly and often
- Continue to keep 6 feet of distance between you and others when at all possible
- Wear a facial covering when you are away from your home, and are unable to maintain 6 feet of distance from others.

As information continues to evolve around COVID-19 symptoms, there is one symptom that wasn't initially top of mind, and that is "a new loss of taste or smell". In a study done at University of California San Diego Health, it was found that if you have smell and taste loss, you are more than 10 times more likely to have the COVID-19 infection than any other causes of infection. However, the most common first sign remains fever, but fatigue and loss of smell and taste follow as other very common initial symptoms.

A list of symptoms is below; this list does not include all possible symptoms. Please also keep in mind that individuals can test positive, and be completely asymptomatic.

- Fever or chills
- Cough
- Shortness of breath or difficulty breathing
- Fatigue
- Muscle or body aches
- Headache
- New loss of taste or smell
- Sore throat
- Congestion or runny nose
- Nausea or vomiting
- Diarrhea.
